Portfolio | GitHub | LinkedIn | LeetCode | Codeforces

Education

K.R. Mangalam University — Gurugram, Haryana
B.Tech in Computer Science and Engineering (AI & ML) — Expected Graduation: 2027

Professional Experience

Infosys Springboard — *July 2026 – September 2026*
AI Intern

- Developed AI/ML solutions using Python, TensorFlow, scikit-learn, Pandas, and NumPy for data preprocessing, model training, evaluation, and deployment.
- Applied feature engineering, hyperparameter tuning, and cross-validation; used MLflow, FastAPI, Docker, and CI/CD in model development workflows.

Bluestock — *May 2025 – June 2025*
Software Development Engineer Intern

- Built a full-stack IPO tracking application with a React frontend and Node.js REST APIs, integrating Kafka and SQL to track 50+ IPOs, price bands, listing gains, and reports.
- Improved backend performance by 40% through SQL query optimization and Redis caching.
- Coordinated 9 interns using Git, GitHub, and Jira, contributing to project delivery and development workflows.

Projects

CICD-AI: Event-Driven Failure Intelligence Platform — *July 2026*
GitHub | Live | Demo

- Engineered an event-driven microservices platform using Spring Boot, Apache Kafka, Docker, PostgreSQL, Redis, and React to orchestrate CI/CD workflows and process build failures across distributed services.

DealSignal AI: Agentic AI Platform — *October 2026*
GitHub | Demo

- Built an agentic B2B intelligence platform using Python, FastAPI, and React, implementing a bounded agent state machine, dynamic tool registry, evidence-grounded research, deterministic lead scoring, and multi-step workflows.
- Implemented source provenance tracking, prompt-injection defenses, SSRF protection, contradiction auditing, and human-in-the-loop email workflows; developed a 30-case evaluation benchmark to compare baseline and improved agent architectures.

AgentEval: AI Agent Evaluation Framework — *September 2026*
GitHub

- Engineered an AI agent evaluation framework combining LLM-as-a-Judge, deterministic assertions, Pytest benchmarks, AST-based analysis, and automated functional and security testing.
- Implemented sandboxed execution, structured scoring, regression testing, failure analysis, and SQLite-backed experiment tracking to assess AI-generated code and agent reliability.

Technical Skills

Core Skills:	Data Management, Analytical Thinking, Attention to Detail, Problem Solving
Languages:	Python, SQL
AI & LLMs:	ChatGPT, Gemini, Claude, Prompt Engineering, LLM Evaluation
Data Operations:	Google Sheets, Data Cleaning, Data Validation, Quality Checks
Management:	Workflow Tracking, Process Documentation, Quality Assurance, Task Management
Tools:	Excel, Pandas, Data Analysis, Reporting, Multilingual Data Handling

Achievements

- **WebApp for UNI:** Used by atleast 2.5k students on incubation day.
- **LeetCode:** 1600+ rating; 500+ problems solved.
- **TCS CodeVita S13:** Ranked 103 globally.
- **Hackathons:** 4 x hackathon winner.
- **College Youth Ideathon:** Top 100 in India.
- **Workshops:** Speaker at 3 Tech workshops
- **Events:** student coordinator at 6 Tech Event
